

Get frame-accurate motion control  
along straight and curved track with

# RevolveR

Uses standard geared heads, film and video cameras, and Preston lens control.  
Our innovative drive system allows straight and curved tracking combinations  
using off the shelf track.

Provides key-framing, variable speed live action and time-lapsed playback,  
with a large multi-move memory.

Local and remotely operated head and tracking axes, at up to several hundred metres.

The whole system fits into two flight cases, and weighs less than 50Kg.

Available for hire from **One8Six** London and **Louma Systems** Paris.
